Creating Editable Div Using JavaScript: Exercise 2 | JavaScript Tutorial In Hindi #21

Until now, we have explored many new concepts of JavaScript. Now it's time to solve the exercise. The task you have to do is **"Creating Editable Div Using JavaScript"**. In this exercise, you have to use an event listener. If you have not watched the tutorial about events and event objects in JavaScript, then check [tutorial#17](#).

Problem Statement:-

You have to create a div and inject it into the page, which has the heading. Whenever someone clicks on the div, it should be converted into an editable div. When the user clicks away (use blur event), save the note into the local storage.

If you are not familiar with the concept of local storage, check [tutorial#20](#). You are advised to participate in solving this problem. You cannot learn to code by just watching the code implementation until you start doing it yourself.

Have you solved this task? If yes, then it's time to check the solution. The solution is discussed in [tutorial#25](#)

If you like my work, then keep supporting and stay up to date with [codewithharry](#).

Website.html code as described/written in the video

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
```

```
<meta http-equiv="X-UA-Compatible" content="ie=edge">
<title>Document</title>
</head>
<body>
  <div class="container">
    <h1 id="heading"> Welcome to Code With Harry</h1>
    <div id="myfirst" class="child red good" id="first">child 1

      <ul class="this">
        <li class="childul">this</li>
        <li class="childul">is</li>
        <li class="childul">a</li>
        <li class="childul">list </li>
        <li class="childul">of my dreams</li>
      </ul>
    </div>
    <div class="child">child 2</div>
    <div class="child red">child 3</div>
    <div class="child">child 4</div>
    <form action="none.html" method="post">
      <a href="//codewithharry.com">Go to Code With Harry</a>
      <br>
      <br>
      Search this website: <input type="text" name="Hello" id="">
      <input type="button" value="submit">
    </form>
  </div>
  <br>
  <div class="no">this is a dummy div1</div>
  <div class="no">this is a dummy div2</div>
  <div class="no">this is a dummy div3</div>
</body>
<!-- <script src="js/tut12.js"></script> -->
<!-- <script src="js/tut14.js"></script> -->
<script src="js/tut15.js"></script>
</html>
```

JavaScript code as described/written in the video

```
console.log('Tutorial 21 exercise 2 JavaScript');  
/*
```

You have to create a div and inject it into the page which contains a heading.

whenever someone clicks on the div, it should be converted into an editable item. whenever user clicks away (blur). save the note into

```
*/
```
