Day 68 - Exercise 7 - Clear the Clutter

Write a program to clear the clutter inside a folder on your computer. You should use os module to rename all the png images from 1.png all the way till n.png where n is the number of png files in that folder. Do the same for other file formats. For example: sfdsf.png --> 1.png vfsf.png --> 2.png this.png --> 3.png design.png --> 4.png name.png --> 5.png
